# GNU AFFERO GENERAL PUBLIC LICENSE

Version 3, 19 November 2007

Copyright (C) 2007 Free Software Foundation, Inc. <<http://fsf.org/>>  
Everyone is permitted to copy and distribute verbatim copies  
of **this** license document, but changing it is not allowed.

## Preamble

The GNU Affero General Public License is a free, copyleft license **for**  
software and other kinds of works, specifically designed to ensure  
cooperation with the community in the **case** of network server software.

The licenses **for** most software and other practical works are designed  
to take away your freedom to share and change the works. By contrast,  
our General Public Licenses are intended to guarantee your freedom to  
share and change all versions of a program--to make sure it remains free  
software **for** all its users.

When we speak of free software, we are referring to freedom, not  
price. Our General Public Licenses are designed to make sure that you  
have the freedom to distribute copies of free **software** (and charge **for**  
them **if** you wish), that you receive source code or can get it **if** you  
want it, that you can change the software or use pieces of it in **new**  
free programs, and that you know you can **do** these things.

Developers that use our General Public Licenses protect your rights  
with two steps: (1) **assert** copyright on the software, and (2) offer  
you **this** License which gives you legal permission to copy, distribute  
and/or modify the software.

A secondary benefit of defending all users' freedom is that  
improvements made in alternate versions of the program, **if** they  
receive widespread use, become available **for** other developers to  
incorporate. Many developers of free software are heartened and  
encouraged by the resulting cooperation. However, in the **case** of  
software used on network servers, **this** result may fail to come about.  
The GNU General Public License permits making a modified version and  
letting the **public** access it on a server without ever releasing its  
source code to the **public**.

The GNU Affero General Public License is designed specifically to  
ensure that, in such cases, the modified source code becomes available  
to the community. It requires the operator of a network server to  
provide the source code of the modified version running there to the  
users of that server. Therefore, **public** use of a modified version, on  
a publicly accessible server, gives the **public** access to the source  
code of the modified version.

An older license, called the Affero General Public License and  
published by Affero, was designed to accomplish similar goals. This is  
a different license, not a version of the Affero GPL, but Affero has  
released a **new** version of the Affero GPL which permits relicensing under  
**this** license.

The precise terms and conditions **for** copying, distribution and  
modification follow.

## TERMS AND CONDITIONS

60  
61 0. Definitions.  
62  
63 "This License" refers to version 3 of the GNU Affero General Public License.  
64  
65 "Copyright" also means copyright-like laws that apply to other kinds of  
66 works, such as semiconductor masks.  
67  
68 "The Program" refers to any copyrightable work licensed under this  
69 License. Each licensee is addressed as "you". "Licensees" and  
70 "recipients" may be individuals or organizations.  
71  
72 To "modify" a work means to copy from or adapt all or part of the work  
73 in a fashion requiring copyright permission, other than the making of an  
74 exact copy. The resulting work is called a "modified version" of the  
75 earlier work or a work "based on" the earlier work.  
76  
77 A "covered work" means either the unmodified Program or a work based  
78 on the Program.  
79  
80 To "propagate" a work means to do anything with it that, without  
81 permission, would make you directly or secondarily liable for  
82 infringement under applicable copyright law, except executing it on a  
83 computer or modifying a private copy. Propagation includes copying,  
84 distribution (with or without modification), making available to the  
85 public, and in some countries other activities as well.  
86  
87 To "convey" a work means any kind of propagation that enables other  
88 parties to make or receive copies. Mere interaction with a user through  
89 a computer network, with no transfer of a copy, is not conveying.  
90  
91 An interactive user interface displays "Appropriate Legal Notices"  
92 to the extent that it includes a convenient and prominently visible  
93 feature that (1) displays an appropriate copyright notice, and (2)  
94 tells the user that there is no warranty for the work (except to the  
95 extent that warranties are provided), that licensees may convey the  
96 work under this License, and how to view a copy of this License. If  
97 the interface presents a list of user commands or options, such as a  
98 menu, a prominent item in the list meets this criterion.  
99  
100 1. Source Code.  
101  
102 The "source code" for a work means the preferred form of the work  
103 for making modifications to it. "Object code" means any non-source  
104 form of a work.  
105  
106 A "Standard Interface" means an interface that either is an official  
107 standard defined by a recognized standards body, or, in the case of  
108 interfaces specified for a particular programming language, one that  
109 is widely used among developers working in that language.  
110  
111 The "System Libraries" of an executable work include anything, other  
112 than the work as a whole, that (a) is included in the normal form of  
113 packaging a Major Component, but which is not part of that Major  
114 Component, and (b) serves only to enable use of the work with that  
115 Major Component, or to implement a Standard Interface for which an  
116 implementation is available to the public in source code form. A  
117 "Major Component", in this context, means a major essential component  
118 (kernel, window system, and so on) of the specific operating system

119 (if any) on which the executable work runs, or a compiler used to  
120 produce the work, or an object code interpreter used to run it.

121

122 The "Corresponding Source" for a work in object code form means all  
123 the source code needed to generate, install, and (for an executable  
124 work) run the object code and to modify the work, including scripts to  
125 control those activities. However, it does not include the work's  
126 System Libraries, or general-purpose tools or generally available free  
127 programs which are used unmodified in performing those activities but  
128 which are not part of the work. For example, Corresponding Source  
129 includes interface definition files associated with source files for  
130 the work, and the source code for shared libraries and dynamically  
131 linked subprograms that the work is specifically designed to require,  
132 such as by intimate data communication or control flow between those  
133 subprograms and other parts of the work.

134

135 The Corresponding Source need not include anything that users  
136 can regenerate automatically from other parts of the Corresponding  
137 Source.

138

139 The Corresponding Source for a work in source code form is that  
140 same work.

141

## 142 2. Basic Permissions.

143

144 All rights granted under this License are granted for the term of  
145 copyright on the Program, and are irrevocable provided the stated  
146 conditions are met. This License explicitly affirms your unlimited  
147 permission to run the unmodified Program. The output from running a  
148 covered work is covered by this License only if the output, given its  
149 content, constitutes a covered work. This License acknowledges your  
150 rights of fair use or other equivalent, as provided by copyright law.

151

152 You may make, run and propagate covered works that you do not  
153 convey, without conditions so long as your license otherwise remains  
154 in force. You may convey covered works to others for the sole purpose  
155 of having them make modifications exclusively for you, or provide you  
156 with facilities for running those works, provided that you comply with  
157 the terms of this License in conveying all material for which you do  
158 not control copyright. Those thus making or running the covered works  
159 for you must do so exclusively on your behalf, under your direction  
160 and control, on terms that prohibit them from making any copies of  
161 your copyrighted material outside their relationship with you.

162

163 Conveying under any other circumstances is permitted solely under  
164 the conditions stated below. Sublicensing is not allowed; section 10  
165 makes it unnecessary.

166

## 167 3. Protecting Users' Legal Rights From Anti-Circumvention Law.

168

169 No covered work shall be deemed part of an effective technological  
170 measure under any applicable law fulfilling obligations under article  
171 11 of the WIPO copyright treaty adopted on 20 December 1996, or  
172 similar laws prohibiting or restricting circumvention of such  
173 measures.

174

175 When you convey a covered work, you waive any legal power to forbid  
176 circumvention of technological measures to the extent such circumvention  
177 is effected by exercising rights under this License with respect to

178 the covered work, and you disclaim any intention to limit operation or  
179 modification of the work as a means of enforcing, against the work's  
180 users, your or third parties' legal rights to forbid circumvention of  
181 technological measures.

182

#### 183 4. Conveying Verbatim Copies.

184

185 You may convey verbatim copies of the Program's source code as you  
186 receive it, in any medium, provided that you conspicuously and  
187 appropriately publish on each copy an appropriate copyright notice;  
188 keep intact all notices stating that this License and any  
189 non-permissive terms added in accord with section 7 apply to the code;  
190 keep intact all notices of the absence of any warranty; and give all  
191 recipients a copy of this License along with the Program.

192

193 You may charge any price or no price for each copy that you convey,  
194 and you may offer support or warranty protection for a fee.

195

#### 196 5. Conveying Modified Source Versions.

197

198 You may convey a work based on the Program, or the modifications to  
199 produce it from the Program, in the form of source code under the  
200 terms of section 4, provided that you also meet all of these conditions:

201

202 a) The work must carry prominent notices stating that you modified  
203 it, and giving a relevant date.

204

205 b) The work must carry prominent notices stating that it is  
206 released under this License and any conditions added under section  
207 7. This requirement modifies the requirement in section 4 to  
208 "keep intact all notices".

209

210 c) You must license the entire work, as a whole, under this  
211 License to anyone who comes into possession of a copy. This  
212 License will therefore apply, along with any applicable section 7  
213 additional terms, to the whole of the work, and all its parts,  
214 regardless of how they are packaged. This License gives no  
215 permission to license the work in any other way, but it does not  
216 invalidate such permission if you have separately received it.

217

218 d) If the work has interactive user interfaces, each must display  
219 Appropriate Legal Notices; however, if the Program has interactive  
220 interfaces that do not display Appropriate Legal Notices, your  
221 work need not make them do so.

222

223 A compilation of a covered work with other separate and independent  
224 works, which are not by their nature extensions of the covered work,  
225 and which are not combined with it such as to form a larger program,  
226 in or on a volume of a storage or distribution medium, is called an  
227 "aggregate" if the compilation and its resulting copyright are not  
228 used to limit the access or legal rights of the compilation's users  
229 beyond what the individual works permit. Inclusion of a covered work  
230 in an aggregate does not cause this License to apply to the other  
231 parts of the aggregate.

232

#### 233 6. Conveying Non-Source Forms.

234

235 You may convey a covered work in object code form under the terms  
236 of sections 4 and 5, provided that you also convey the

237 machine-readable Corresponding Source under the terms of `this` License,  
 238 in one of these ways:

239

240 a) Convey the object code in, or embodied in, a physical `product`  
 241 (including a physical distribution medium), accompanied by the  
 242 Corresponding Source fixed on a durable physical medium  
 243 customarily used `for` software interchange.

244

245 b) Convey the object code in, or embodied in, a physical `product`  
 246 (including a physical distribution medium), accompanied by a  
 247 written offer, valid `for` at least three years and valid `for` as  
 248 `long` as you offer spare parts or customer support `for` that product  
 249 model, to give anyone who possesses the object code `either` (1) a  
 250 copy of the Corresponding Source `for` all the software in the  
 251 product that is covered by `this` License, on a durable physical  
 252 medium customarily used `for` software interchange, `for` a price no  
 253 more than your reasonable cost of physically performing `this`  
 254 conveying of source, or (2) access to copy the  
 255 Corresponding Source from a network server at no charge.

256

257 c) Convey individual copies of the object code with a copy of the  
 258 written offer to provide the Corresponding Source. This  
 259 alternative is allowed only occasionally and noncommercially, and  
 260 only `if` you received the object code with such an offer, in accord  
 261 with subsection 6b.

262

263 d) Convey the object code by offering access from a designated  
 264 `place` (gratis or `for` a charge), and offer equivalent access to the  
 265 Corresponding Source in the same way through the same place at no  
 266 further charge. You need not require recipients to copy the  
 267 Corresponding Source along with the object code. If the place to  
 268 copy the object code is a network server, the Corresponding Source  
 269 may be on a different `server` (operated by you or a third party)  
 270 that supports equivalent copying facilities, provided you maintain  
 271 clear directions next to the object code saying where to find the  
 272 Corresponding Source. Regardless of what server hosts the  
 273 Corresponding Source, you remain obligated to ensure that it is  
 274 available `for` as `long` as needed to satisfy these requirements.

275

276 e) Convey the object code using peer-to-peer transmission, provided  
 277 you inform other peers where the object code and Corresponding  
 278 Source of the work are being offered to the general `public` at no  
 279 charge under subsection 6d.

280

281 A separable portion of the object code, whose source code is excluded  
 282 from the Corresponding Source as a System Library, need not be  
 283 included in conveying the object code work.

284

285 A "`User Product`" is `either` (1) a "`consumer product`", which means any  
 286 tangible personal property which is normally used `for` personal, family,  
 287 or household purposes, or (2) anything designed or sold `for` incorporation  
 288 into a dwelling. In determining whether a product is a consumer product,  
 289 doubtful cases shall be resolved in favor of coverage. For a particular  
 290 product received by a particular user, "`normally used`" refers to a  
 291 typical or common use of that `class of` product, regardless of the status  
 292 of the particular user or of the way in which the particular user  
 293 actually uses, or expects or is expected to use, the product. A product  
 294 is a consumer product regardless of whether the product has substantial  
 295 commercial, industrial or non-consumer uses, unless such uses represent

296 the only significant mode of use of the product.

297  
298 "Installation Information" for a User Product means any methods,  
299 procedures, authorization keys, or other information required to install  
300 and execute modified versions of a covered work in that User Product from  
301 a modified version of its Corresponding Source. The information must  
302 suffice to ensure that the continued functioning of the modified object  
303 code is in no case prevented or interfered with solely because  
304 modification has been made.

305  
306 If you convey an object code work under this section in, or with, or  
307 specifically for use in, a User Product, and the conveying occurs as  
308 part of a transaction in which the right of possession and use of the  
309 User Product is transferred to the recipient in perpetuity or for a  
310 fixed term (regardless of how the transaction is characterized), the  
311 Corresponding Source conveyed under this section must be accompanied  
312 by the Installation Information. But this requirement does not apply  
313 if neither you nor any third party retains the ability to install  
314 modified object code on the User Product (for example, the work has  
315 been installed in ROM).

316  
317 The requirement to provide Installation Information does not include a  
318 requirement to continue to provide support service, warranty, or updates  
319 for a work that has been modified or installed by the recipient, or for  
320 the User Product in which it has been modified or installed. Access to a  
321 network may be denied when the modification itself materially and  
322 adversely affects the operation of the network or violates the rules and  
323 protocols for communication across the network.

324  
325 Corresponding Source conveyed, and Installation Information provided,  
326 in accord with this section must be in a format that is publicly  
327 documented (and with an implementation available to the public in  
328 source code form), and must require no special password or key for  
329 unpacking, reading or copying.

330  
331 7. Additional Terms.

332  
333 "Additional permissions" are terms that supplement the terms of this  
334 License by making exceptions from one or more of its conditions.  
335 Additional permissions that are applicable to the entire Program shall  
336 be treated as though they were included in this License, to the extent  
337 that they are valid under applicable law. If additional permissions  
338 apply only to part of the Program, that part may be used separately  
339 under those permissions, but the entire Program remains governed by  
340 this License without regard to the additional permissions.

341  
342 When you convey a copy of a covered work, you may at your option  
343 remove any additional permissions from that copy, or from any part of  
344 it. (Additional permissions may be written to require their own  
345 removal in certain cases when you modify the work.) You may place  
346 additional permissions on material, added by you to a covered work,  
347 for which you have or can give appropriate copyright permission.

348  
349 Notwithstanding any other provision of this License, for material you  
350 add to a covered work, you may (if authorized by the copyright holders of  
351 that material) supplement the terms of this License with terms:

352  
353 a) Disclaiming warranty or limiting liability differently from the  
354 terms of sections 15 and 16 of this License; or

- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use **for** publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law **for** use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the **material** (or modified versions of it) with contractual assumptions of liability to the recipient, **for** any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "**further restrictions**" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by **this** License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under **this** License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with **this** section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

## 8. Termination.

You may not propagate or modify a covered work except as expressly provided under **this** License. Any attempt otherwise to propagate or modify it is **void**, and will automatically terminate your rights under **this** License (including any patent licenses granted under the third paragraph of section 11).

However, **if** you cease all violation of **this** License, then your license from a particular copyright holder is **reinstated** (a) provisionally, unless and until the copyright holder explicitly and **finally** terminates your license, and (b) permanently, **if** the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently **if** the copyright holder notifies you of the violation by some reasonable means, **this** is the first time you have received notice of violation of **this** License (**for** any work) from that

414 copyright holder, and you cure the violation prior to 30 days after  
415 your receipt of the notice.

416  
417 Termination of your rights under **this** section does not terminate the  
418 licenses of parties who have received copies or rights from you under  
419 **this** License. If your rights have been terminated and not permanently  
420 reinstated, you **do** not qualify to receive **new** licenses **for** the same  
421 material under section 10.

#### 422 423 9. Acceptance Not Required **for** Having Copies.

424  
425 You are not required to accept **this** License in order to receive or  
426 run a copy of the Program. Ancillary propagation of a covered work  
427 occurring solely as a consequence of using peer-to-peer transmission  
428 to receive a copy likewise does not require acceptance. However,  
429 nothing other than **this** License grants you permission to propagate or  
430 modify any covered work. These actions infringe copyright **if** you **do**  
431 not accept **this** License. Therefore, by modifying or propagating a  
432 covered work, you indicate your acceptance of **this** License to **do** so.

#### 433 434 10. Automatic Licensing of Downstream Recipients.

435  
436 Each time you convey a covered work, the recipient automatically  
437 receives a license from the original licensors, to run, modify and  
438 propagate that work, subject to **this** License. You are not responsible  
439 **for** enforcing compliance by third parties with **this** License.

440  
441 An "**entity transaction**" is a transaction transferring control of an  
442 organization, or substantially all assets of one, or subdividing an  
443 organization, or merging organizations. If propagation of a covered  
444 work results from an entity transaction, each party to that  
445 transaction who receives a copy of the work also receives whatever  
446 licenses to the work the party's predecessor in interest had or could  
447 give under the previous paragraph, plus a right to possession of the  
448 Corresponding Source of the work from the predecessor in interest, **if**  
449 the predecessor has it or can get it with reasonable efforts.

450  
451 You may not impose any further restrictions on the exercise of the  
452 rights granted or affirmed under **this** License. For example, you may  
453 not impose a license fee, royalty, or other charge **for** exercise of  
454 rights granted under **this** License, and you may not initiate **litigation**  
455 (including a cross-claim or counterclaim in a lawsuit) alleging that  
456 any patent claim is infringed by making, using, selling, offering **for**  
457 sale, or importing the Program or any portion of it.

#### 458 459 11. Patents.

460  
461 A "**contributor**" is a copyright holder who authorizes use under **this**  
462 License of the Program or a work on which the Program is based. The  
463 work thus licensed is called the contributor's "**contributor version**".

464  
465 A contributor's "**essential patent claims**" are all patent claims  
466 owned or controlled by the contributor, whether already acquired or  
467 hereafter acquired, that would be infringed by some manner, permitted  
468 by **this** License, of making, using, or selling its contributor version,  
469 but **do** not include claims that would be infringed only as a  
470 consequence of further modification of the contributor version. For  
471 purposes of **this** definition, "**control**" includes the right to grant  
472 patent sublicenses in a manner consistent with the requirements of

473 this License.

474

475 Each contributor grants you a non-exclusive, worldwide, royalty-free  
476 patent license under the contributor's essential patent claims, to  
477 make, use, sell, offer for sale, import and otherwise run, modify and  
478 propagate the contents of its contributor version.

479

480 In the following three paragraphs, a "patent license" is any express  
481 agreement or commitment, however denominated, not to enforce a patent  
482 (such as an express permission to practice a patent or covenant not to  
483 sue for patent infringement). To "grant" such a patent license to a  
484 party means to make such an agreement or commitment not to enforce a  
485 patent against the party.

486

487 If you convey a covered work, knowingly relying on a patent license,  
488 and the Corresponding Source of the work is not available for anyone  
489 to copy, free of charge and under the terms of this License, through a  
490 publicly available network server or other readily accessible means,  
491 then you must either (1) cause the Corresponding Source to be so  
492 available, or (2) arrange to deprive yourself of the benefit of the  
493 patent license for this particular work, or (3) arrange, in a manner  
494 consistent with the requirements of this License, to extend the patent  
495 license to downstream recipients. "Knowingly relying" means you have  
496 actual knowledge that, but for the patent license, your conveying the  
497 covered work in a country, or your recipient's use of the covered work  
498 in a country, would infringe one or more identifiable patents in that  
499 country that you have reason to believe are valid.

500

501 If, pursuant to or in connection with a single transaction or  
502 arrangement, you convey, or propagate by procuring conveyance of, a  
503 covered work, and grant a patent license to some of the parties  
504 receiving the covered work authorizing them to use, propagate, modify  
505 or convey a specific copy of the covered work, then the patent license  
506 you grant is automatically extended to all recipients of the covered  
507 work and works based on it.

508

509 A patent license is "discriminatory" if it does not include within  
510 the scope of its coverage, prohibits the exercise of, or is  
511 conditioned on the non-exercise of one or more of the rights that are  
512 specifically granted under this License. You may not convey a covered  
513 work if you are a party to an arrangement with a third party that is  
514 in the business of distributing software, under which you make payment  
515 to the third party based on the extent of your activity of conveying  
516 the work, and under which the third party grants, to any of the  
517 parties who would receive the covered work from you, a discriminatory  
518 patent license (a) in connection with copies of the covered work  
519 conveyed by you (or copies made from those copies), or (b) primarily  
520 for and in connection with specific products or compilations that  
521 contain the covered work, unless you entered into that arrangement,  
522 or that patent license was granted, prior to 28 March 2007.

523

524 Nothing in this License shall be construed as excluding or limiting  
525 any implied license or other defenses to infringement that may  
526 otherwise be available to you under applicable patent law.

527

528 12. No Surrender of Others' Freedom.

529

530 If conditions are imposed on you (whether by court order, agreement or  
531 otherwise) that contradict the conditions of this License, they do not

excuse you from the conditions of `this` License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under `this` License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, `if` you agree to terms that obligate you to collect a royalty `for` further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and `this` License would be to refrain entirely from conveying the Program.

13. Remote Network Interaction; Use with the GNU General Public License.

Notwithstanding any other provision of `this` License, `if` you modify the Program, your modified version must prominently offer all users interacting with it remotely through a computer `network` (`if` your version supports such interaction) an opportunity to receive the Corresponding Source of your version by providing access to the Corresponding Source from a network server at no charge, through some standard or customary means of facilitating copying of software. This Corresponding Source shall include the Corresponding Source `for` any work covered by version 3 of the GNU General Public License that is incorporated pursuant to the following paragraph.

Notwithstanding any other provision of `this` License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU General Public License into a single combined work, and to convey the resulting work. The terms of `this` License will `continue` to apply to the part which is the covered work, but the work with which it is combined will remain governed by version 3 of the GNU General Public License.

14. Revised Versions of `this` License.

The Free Software Foundation may publish revised and/or `new` versions of the GNU Affero General Public License from time to time. Such `new` versions will be similar in spirit to the present version, but may differ in detail to address `new` problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU Affero General Public License "`or any later version`" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU Affero General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU Affero General Public License can be used, that proxy's `public` statement of acceptance of a version permanently authorizes you to choose that version `for` the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT

591 HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY  
592 OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO,  
593 THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR  
594 PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM  
595 IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF  
596 ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

597  
598 16. Limitation of Liability.

599  
600 IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING  
601 WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS  
602 THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY  
603 GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE  
604 USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF  
605 DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD  
606 PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS),  
607 EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF  
608 SUCH DAMAGES.

609  
610 17. Interpretation of Sections 15 and 16.

611  
612 If the disclaimer of warranty and limitation of liability provided  
613 above cannot be given local legal effect according to their terms,  
614 reviewing courts shall apply local law that most closely approximates  
615 an absolute waiver of all civil liability in connection with the  
616 Program, unless a warranty or assumption of liability accompanies a  
617 copy of the Program in return for a fee.

618  
619 END OF TERMS AND CONDITIONS

620  
621 How to Apply These Terms to Your New Programs

622  
623 If you develop a new program, and you want it to be of the greatest  
624 possible use to the public, the best way to achieve this is to make it  
625 free software which everyone can redistribute and change under these terms.

626  
627 To do so, attach the following notices to the program. It is safest  
628 to attach them to the start of each source file to most effectively  
629 state the exclusion of warranty; and each file should have at least  
630 the "copyright" line and a pointer to where the full notice is found.

631  
632 <one line to give the program's name and a brief idea of what it does.>  
633 Copyright (C) <year> <name of author>

634  
635 This program is free software: you can redistribute it and/or modify  
636 it under the terms of the GNU Affero General Public License as published  
637 by the Free Software Foundation, either version 3 of the License, or  
638 (at your option) any later version.

639  
640 This program is distributed in the hope that it will be useful,  
641 but WITHOUT ANY WARRANTY; without even the implied warranty of  
642 MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the  
643 GNU Affero General Public License for more details.

644  
645 You should have received a copy of the GNU Affero General Public License  
646 along with this program. If not, see <<http://www.gnu.org/licenses/>>.

647  
648 Also add information on how to contact you by electronic and paper mail.

649

650 If your software can interact with users remotely through a computer  
 651 network, you should also make sure that it provides a way for users to  
 652 get its source. For example, if your program is a web application, its  
 653 interface could display a "Source" link that leads users to an archive  
 654 of the code. There are many ways you could offer source, and different  
 655 solutions will be better for different programs; see section 13 for the  
 656 specific requirements.

657

658 You should also get your employer (if you work as a programmer) or school,  
 659 if any, to sign a "copyright disclaimer" for the program, if necessary.  
 660 For more information on this, and how to apply and follow the GNU AGPL, see  
 661 <<http://www.gnu.org/licenses/>>.

## README.md

```

1  # COBrA
2  An Ethereum blockchain university project.
3
4  For more information heck the assignments for [COBrA] (docs/assignment/COBrA_Assignment.pdf) and
5  [COBrA DAPP] (docs/assignment/COBrA_DAPP_Assignment.pdf) and the
6  [COBrA DAPP Relationship] (docs/report/COBrA_DAPP_Relationship.pdf).
7
8  See also the [Javadoc] (https://daquinoaldo.github.io/COBrA/javadoc).
9
10 ## Requirements
11 - [Ethereum (geth)] (https://geth.ethereum.org/downloads/)
12   - Ubuntu:
13     - `sudo add-apt-repository -y ppa:ethereum/ethereum`
14     - `sudo apt-get update`
15     - `sudo apt-get install ethereum`
16   - MacOS:
17     - `brew tap ethereum/ethereum`
18     - `brew install ethereum`
19   - Compile sources (requires [Go] (https://golang.org/dl/)):
20     - `go install github.com/ethereum/go-ethereum/cmd/geth`
21 - [Solidity compiler] (https://github.com/ethereum/solidity)
22   - Ubuntu:
23     - `sudo add-apt-repository ppa:ethereum/ethereum`
24     - `sudo apt-get update`
25     - `sudo apt-get install solc`
26   - MacOS:
27     - `brew tap ethereum/ethereum`
28     - `brew install solidity`
29   - [Build from
30     ↪ sources] (http://solidity.readthedocs.io/en/v0.4.24/installing-solidity.html#building-from-source)
31 - Java 10
32   - ↪ [JRE] (http://www.oracle.com/technetwork/java/javase/downloads/jre10-downloads-4417026.html)
33   - ↪ [JDK] (http://www.oracle.com/technetwork/java/javase/downloads/jdk10-downloads-4416644.html)
34 - [Apache Maven] (https://maven.apache.org/install.html)
35   - Ubuntu: `sudo apt-get install maven`
36   - MacOS: `sudo brew install maven` (requires [brew] (https://docs.brew.sh/Installation))
37   - [Binaries] (https://maven.apache.org/download.cgi)
38 ## Run
39 ### Compile sources

```

```

40 To compile solidity contracts, generate Java contract with web3j and build JARs run bash
   ↪ install.sh.
41
42 ### Ethereum client
43 Start an Ethereum node on the testnet Ropsten with
   ↪ [geth] (https://github.com/ethereum/go-ethereum/wiki/geth) running
44 geth --rpcapi personal,db,eth,net,web3 --rpc --testnet or start an emulated node with
   ↪ ganache-cli.
45
46 ### App
47 Run the GUI with java -jar DAPP/jar/gui-1.0-jar-with-dependencies.jar. It starts a wizard
   ↪ that allows you to create
48 credentials from your private key, deploy a new catalog or connect to an existent one and
   ↪ choose if you want the
49 author's or the customer's view.
50
51 Authors also need a running author-server in which store their content in order to deploy a
   ↪ ContentManagementContract.
52 You can run an author-server with java -jar
   ↪ DAPP/jar/author-server-1.0-jar-with-dependencies.jar -k <your-private-key>
53 -c <existent-catalog-contract-address>.
54 The contract deploy can be done from the author's GUI, then the GUI can be stopped and the
   ↪ content will remain available
55 as far as the author-server remain online.

```
